DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 3 - 6 are rejected under 35 U.S.C. 102(e) as being (CLEARLY) anticipated by Kollias et al. Figure 11 and the description thereof beginning in column 13 disclose a method and apparatus for measuring glucose concentration, that includes a laser, optical detector, and a signal processor for quantifying the detected signals. Data related to the quantified signal is provided to control the light source (signal line 103). Theoretical aspects of the measurement are discussed in column 3, line 64 - column 5, line 15.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 2, 7, and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kollias et al. in view of Athan et al. Kollias et al. teach a method and apparatus for

measuring glucose concentration, as described in paragraph 2 above, but do not teach producing a decoded signal, generating variable frequency pulses in accordance with the decoded signal, or counting the pulses. Athan et al. teach an alternate optical measurement system that uses a light to frequency converter and counter to obtain the measurement signals for processing in place of the more standard elements. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Kollias et al. to include a light to frequency converter and counter in their device, since Athan et al. teach that they can be substituted for the standard elements found in an optical measurement system.
